

**Press Release – 11 January 2008**

## **Sensornet Announces Collaboration with Bandweaver in Power Industry**

Sensornet today announces a global collaboration agreement with Bandweaver to supply monitoring solutions for the global power market. Sensornet is the world leader in supplying Distributed Temperature Sensing (DTS) based power cable monitoring solutions with an extensive track record in the industry. This agreement will cement the long-standing relationship that Sensornet has shared with Bandweaver since 2003.

The joint venture will focus exclusively on providing monitoring solutions for the power utility sector. The range of monitoring systems will be comprehensive, including both DTS based solutions (e.g. Dynamic Cable Rating system) and a range of innovative new technologies to provide increased integrity and performance for the entire network.

Richard Kluth, Sensornet Operations Director says "Bandweaver has done an exceptional job of working closely with the customer to develop a range of technologies, that integrate with DTS to provide the operator with a full cable safety monitoring system, improving integrity of the network and aiding the operator to reduce risk and maximise return on assets, and we look forward to this collaboration".

Bandweaver CEO Howell Zhao says "Sensornet has consistently provided the fastest, most accurate, longest range and most reliable DTS systems within the power industry. This collaboration is an exciting opportunity for Sensornet and Bandweaver to provide the power industry with fully integrated next-generation power cable monitoring solutions".
